

## NEW MALL ENTRANCE – MERRY HILL SHOPPING CENTRE

Completed in May 2003, this £500,000 project involved the installation of a new high level tensile fabric canopy over an existing major shopping centre entrance.

The entrance is suspended over an underground service yard and as a result the existing structure had to be significantly enhanced to support the considerable wind loads introduced by the canopy.

The Mall Entrance had to remain fully operational throughout the construction period, necessitating out of hours installation of much of the structure and coverings.
